Senior Full Stack Engineer, 2025 - Present

Tech Company focused on blockchain, crypto and dApps.

- Worked to develop a blockchain-verified ad marketplace on Berachain – advertisers pay only for verified on-chain conversions, attacking the structural fraud built into traditional ad networks.
- Engineered the full-stack architecture for a high-volume Developer Portal and Marketplace, implementing complex B2B workflows for proposal negotiation, real-time bidding, and role-based access control for dApp developers.
- Developed cross-platform SDK extensions and a RESTful "Remote Signing Service" to abstract low-level blockchain complexity, enabling external applications to verify user actions and render targeted advertising units seamlessly.
- Integrated Auth0 + ThirdWeb invisible wallets so end users get blockchain verification without ever interacting with the chain directly.
- Designed and built an AI-assisted campaign briefing assistant on the Anthropic API, helping advertisers translate marketing goals into structured on-chain campaigns.
- Built a real-time analytics engine and dashboard to visualize cross-application user flow and ROI, aggregating disparate on-chain data to provide actionable insights on campaign performance and reward distribution.
- Collaborated in 100% SCRUM-based teams, fully remote from Brazil with a UK/US team.

Paradise Mobile - Bermuda - Remote. Allocated Through Meta IT.

Bermuda's first cloud-native 5G operator, built on Open RAN + AWS — onboarding, CRM, back-office automation, and internal tooling. CRM serving ~10K+ customers.

- Developed onboarding and self-service applications using React, Material UI, Recoil, and Jest, streamlining user experience and improving onboarding time by significantly reducing friction.
- Built and maintained scalable REST APIs and midtier systems with Node.js, TypeScript, SonarQube, GraphQL and AWS, supporting robust CRM integrations.
- Led the creation of back-office support tools that significantly boosted revenue and lowered operational costs.
- Integrated key external platforms such as Zapier, Webflow, Zendesk and headless Strapi to enhance customer support and automation.
- Collaborated effectively within both Kanban and SCRUM based agile teams.

Grupo Tiradentes - Remote. Allocated Through Meta IT.

Northeastern Brazil's leading higher-education group — 50K+ students across 5 states. 60+ years of operation.

- Developed a unified system for educational institutions, managing course offerings, student contracts, financing requests and business reporting, ensuring robust functionality and code quality.
- Designed and implemented scalable front-end interfaces with AngularJS, React and TypeScript, enhancing user experience for the whole company staff and their students.
- Engineered back-end systems and APIs with C#, .NET, and PostgreSQL, streamlining workflows for transactions and users daily.
- Collaborated in 100% SCRUM-based teams.

ArcelorMittal Mines Canada - Remote. Allocated Through Meta IT.

World's leading steel and mining company.

- Led the development of a web application for seamless integration of virtual and manual data, automating complex and manual processes, digitally transforming the way the corporation worked.
- Orchestrated scalable system architecture with Node.js, Sequelize.js, and Microsoft SQL Server, enabling robust data integration across diverse systems.
- Implemented front-end interfaces with React and ensured code quality with Jest and TypeScript, enhancing user experience all while providing innovative and productive ways of working.
- Collaborated in 100% SCRUM-based teams.

Meta IT - Remote

IT Services, IT Consulting and Digital Transformation. Gartner top-ranked consultancy, 35 years in market, Top 10 Employer Brazil by TIME.

- Coordinated different teams and participated in several projects across different fields of the market.
- Engineered internal tools and systems.
- Leveraged a wide range of technologies such as: AngularJS, TypeScript, React, Vue, PHP, TypeORM, Adonis.js, Nest.js and many others.
- Managed multiple databases: MySQL, SQL, Postgres, MongoDB and SQL Server.
- Collaborated in 100% SCRUM-based teams.

Postgraduate: Full-Stack Development

PUCRS - Graduated April 2026

Full Stack Development postgraduate program, covering computer science fundamentals, relational and No-SQL databases, DevOps, agile methodologies, and object-oriented programming. Applying hands-on experience in client-side and server-side architectures, web services, micro-services, cloud computing, software security, UX/UI design and digital innovation methodologies such as Lean Startup and MVP development.

I2A2 - Institute Of Applied AI - Issued 2025

Executed a complete AI project lifecycle, with hands-on experience in advanced LLM strategies, Prompt Engineering, Multimodal IA and building AI agents for enterprise solutions, aligning with the projected future of corporate software.

UNISINOS - Graduated January 2023

Graduation program with practical, industry-relevant skills to build and optimize robust software solutions. It emphasizes full-stack development (e.g., React, Node.js, .NET), database design (e.g., Microsoft SQL Server, PostgreSQL), and modern tools like Docker and Jest, ensuring clean, scalable code. Graduates excel in translating complex business needs into efficient systems, leveraging agile practices (SCRUM) and strong problem-solving to deliver measurable impact in collaborative, fast-paced tech environments.
